

BERLIN MANIFESTO FOR THE ADHERENCE TO SCIENTIFIC STANDARDS IN REGARD TO VACCINES

Vaccines are assumed to be safe and well tolerated. Unfortunately this is not warranted by the licensing procedure and the monitoring process of vaccines. Standards one would normally expect from universally-used pharmaceutical products are not applied to vaccines. Because the number of vaccinations which are recommended to the public and particularly children is constantly increasing and because vaccines contain reactive substances, we demand:

1. INDEPENDENCE! Physicians and scientists with ties to the pharmaceutical industry are as of now no longer permitted to be members of national and international health agencies, boards and committees.

2. TRANSPARENCY! There is no risk-benefit analysis for any of the vaccines licensed so far: What benefit does someone have from the vaccine? What are the true risks from the vaccine, given the very limited trials and studies? How great is the danger for an unvaccinated person to become ill from the disease, given the fact that diseases such as measles were in major decline and milder BEFORE vaccines were introduced?

3. SCIENTIFIC LICENSING STUDIES! Evaluating a vaccine for safety and efficacy requires a placebo-controlled, double blind study. A placebo is scientifically defined as an inert substance. Unfortunately, this is not the case in licensing studies for all vaccines. For example, for Infanrix Hexa or in the case of Gardasil the immune response-enhancing aluminium compounds contained in many vaccines are used instead. Such **unscientific** practices make it possible to license vaccines which as a result do cause many adverse reactions and even fatalities due to the lack of proper and thorough studies – both short and long-term.

4. STRICT CONTROLS! Vaccinations are a preventative measure administered to healthy people which means that most stringent criteria need to be applied to ensure the safety of vaccines. In reality however, there is widespread ignorance and dismissal about possible adverse events. According to the Paul-Ehrlich-Institute, only about 5% of actually occurring adverse reactions are reported in spite of doctors' duty to report adverse events. The authorities recommend and promote vaccination. This is why they are biased and are failing in their duty to monitor vaccines. We need an independent control agency and a vaccine injury register. Badly tolerated vaccines need to be withdrawn.

5. A STUDY OF CHILDREN'S HEALTH IS NEEDED! Not only the RKI's KIGGS-Study, but also other studies (such as Mawson et.al., ISSN: 2059-268X) show that unvaccinated children and youths suffer significantly **less** chronic ill-health. We demand that the data of the health insurers (Krankenversicherer - KV) be evaluated). How often do acute and chronic illnesses occur in children vaccinated according to the STIKO-plan, compared to unvaccinated children? How much on average do sickness insurers pay for the treatment of vaccinated compared with unvaccinated children?

6. ADHERENCE TO HUMAN RIGHTS! The call for introducing mandatory vaccination is becoming ever louder. Such a call ignores that forced vaccination resulting in the injecting of disease germs into the body is legally defined as bodily injury!

Vaccination must remain the individual decision of free citizens! This is all the more important as long as the essential flaws related to the licensing and the use of vaccines, of which we have presented only a small selection, have not been addressed!

A FREE FUTURE FOR HEALTHY PEOPLE!

WITH VACCINES, AT LEAST THE MOST IMPORTANT SCIENTIFIC STANDARDS MUST BE ADHERED TO!

This manifesto was initiated by the organising committee of the Berlin demonstration "A free future of healthy people" which will be held on September 16. It unites the demands of many people including concerned parents, doctors, former employees of government health agencies, parents of vaccine-injured children or investigative journalists who have been involved with the vaccination issue.
